High-Level Adapter 2-Channel High-level adapter for reducing and adapting an amplified signal to a low-level cinch signal for power amplifiers. Speaker outputs of OEM HU or amplified outputs of OEM amplified systems are down-transformed and used as input signal for an amplifier installation. Vehicle-specific T-Harness are used as an installation aid for trouble-free retrofitting of an installation. For the following applications: power amplifier installation matching OEM amplifier output > preamplifier input power amplifier Note: not suitable for OEM units with digital amplifier not suitable for OEM units with impedance monitoring Technical data: 2 channel 6V BTL voltage > +12V remote input: 40W RMS max. output: adjustable Optional: vehicle-specific T-Harness
